Team Make up

- 4-6 kids per team; 9-15 years old
- Closer ages have better dynamics.
- Lower age kids are not necessarily disadvantaged.

Meeting Schedule

- 2 meetings per week is recommended.
- 2-3 hours in duration; less time is inefficient
- Schedule meetings to fit with other activities.
- Fri/Sun seems to work well. Weekday meetings tend to be shorter, longer on weekends.
- Meetings may be more frequent closer to competitions.
- Coaches: add prep time to player commitment of 4-6 hours / week

Resources

- Location: need to choose a home to meet at. It is best if it is always the same location so the board remains undisturbed.
- Table: order 8'x12' table from Los Altos Robotics
- Challenge kit
- Robot kits: best to have one for each two kids
- Computer(s): need to be reliable but performance is not an issue.

Season Timeline

- 8 weeks to design, build, program and test
- Challenge revealed on September 12
- Local scrimmage Oct 16th
- Local competition Nov 19th
- State tournament Dec/Jan

Project Plan

- Make a weekly plan for season
- Track to plan
- Make adjustments
- Leave time for project and practice runs
- Perfection is not the goal -
predictability/consistency is the goal

Team Structure

- Divide and conquer
- Have kids work in small teams (2-3 kids) to accomplish specific tasks.
- Rotate tasks to give kids exposure to both robot building and programming.
- Pair experienced child with inexperienced child where applicable.

Parent Involvement

- Coach: the guide, project advisor, project manager, not hands-on challenge solver - leave it to the kids.
- Asst. coach: supports coach in prep time and team meetings.
- Team manager: helps with team organization, meeting scheduling and other admin activities.
- Guest session by experienced team: It's OK to ask for help, especially helpful for new teams. More than once during the season is necessary.

The Challenge

- The challenge announcement will be on September 12 on the FLL web page.
- The theme this year is “Ocean Odyssey”

FIRST LEGO League travels into the depths of the ocean to explore the mysteries that lie below. The oceans are of vital importance to the health of the Earth and to everyone that lives on this planet; yet only 1% of these magnificent bodies of water have been studied.

Oceans provide inspiration, fun, and food. They absorb carbon and generate oxygen, profoundly affecting the global environmental system. A distress call has been issued to FIRST LEGO League teams around the world to find solutions that will sustain the health, biodiversity, and productivity of the world’s oceans for present and future generations. Join us on September 12 for the unveiling of the 2005 Ocean Odyssey Challenge!

- There are two parts the challenge
 - Research Project
 - Robot Missions

The Research Project

- The research project is an assignment related to the theme of the competition to:
 - Find a Problem
 - Find a Solution
 - Prepare a presentation (be creative!)
- The Research Project topic is announced as a part of the challenge. There will be a very detailed description.
- Some teams chose not to do a research project in order to focus and have fun on the robot challenge. This is a useful strategy, particularly for a new team. This makes it difficult to win the “Director’s Award” because some points come from the research project. However, there are awards in many categories unrelated to the research project.

The Robot Challenge Kit

- The challenge kit is shipped to teams that have registered with FLL (a separate registration from Los Altos Robotics). It includes:
 - A 4' x 8' mat
 - The mission models set; several hundred LEGOs.
 - A CD with the instructions for building the models (about 70 pages in color).
 - 3M Dual Lock Fasteners to attach the LEGO models to the mat.
 - There is a field setup guide announced with the challenge telling where and how to attach the models to the mat.

The Robot Missions

- The challenge is a set of “missions” which are to be done by the robot on the playing field. Last year there were 9 missions to be done in two minutes and thirty seconds which together could score up to 400 points.
- Read the 2005 challenge mission description carefully and interpret it literally. Don't assume anything. Your team needs to understand it.
- In a competition two tables are set side by side and there has been one collaborative or competitive mission. There will most likely be one this year too.

The Rules

- You and your team should also read “The 2005 Rules” carefully.
- One very important rule is the “Materials” Rule:
*The robot, its attachments, accessories, and all other Strategic Objects brought to a Match must be made entirely of LEGO elements in original factory condition. Electrical parts are limited in type and quantity to **1 RCX, 1 Rotation Sensor, 2 Touch Sensors, 2 Light Sensors, 3 Motors, 1 Lamp, and 6 AA batteries.** Stickers, paint, tape, glue, oil, etc. are not allowed, except marker can be used for owner identification in hidden areas only.*
(From the 2004 Rules)

The Rules

Note that any LEGOs are allowed, not just those in the MINDSTORM kit. Electrical parts are the only thing that is restricted.

- Make sure that you and your team understand and follow the rules for “The Base”. The base where the robot is launched from. There are penalties for touching the robot outside of the base.
- The score is determined at the end of the match, by the condition of the field at that time only.

Mission and Rule Clarifications

- Check back periodically to look for updates to the Q&A on the FLL web page.
- The “Rules” page tells how to email questions about the robot game part of the challenge. If you think that your robot strategy might violate the rules use this resource to get a clarification. This is the only reliable source for correct answers about the challenge. Print out and bring the email response to the competitions. You have to produce it to avoid losing points or being disqualified.

Competitions

The competitions are the opportunity for the kids to show what they have accomplished and put their robots to the test in a competitive environment.

- At the competitions each team will have a schedule for when they will run their robots, present their research project, meet with the judges, and do their three robot mission attempts.
- Each team will have multiple robot missions runs of two minutes and thirty seconds each (the time limit could change this year, check the challenge). They will compete with another team at an adjacent table to get as many points as possible. Team match ups are rotated so that your team will face three different teams.

Competitions

- There is time between runs (usually around ½ hour) to repair problems and there are practice tables available to help teams with last minute checks and practices.
- It is common for teams to have widely different scores from run to run depending on how well the robot performed that time. Don't let them get discouraged if they get a low score on their first run.
- Bring a computer (and extra batteries) to the competition in case you need to reload the programs. It is important to have a box that fully covers the robot and the IR tower to avoid downloading your programs into any other teams robot.

BE CAREFUL WHEN DOWNLOADING!

Competitions

- The coaches manual has a very nicely detailed section on “Awards and Judging Criteria”. Read it well before the competitions so that you and your team know what to expect.
- Volunteers are needed to make the competitions work. Parents from each team are expected to help out in some way.
- For the Los Altos competitions Michael has recruited and developed a number of judges but new ones are always needed.

Scrimmage

- The Los Altos Scrimmage is October 16 from 12:30 to 17:15.
- The plan is to have two Los Altos scrimmages and competitions this year, but it will depend upon the number of teams and volunteers.
- Oak Avenue School and Covington School are the planned sites. Check the website later in the season to find out your teams scrimmage location.
- Your team should expect to be at the competition for the full 5 hours; there is a lot to do and see.
- The scrimmage is an opportunity to learn how the competition works and see what other teams are doing

Scrimmage

- Have your team ready to do whatever they can do. Many teams only attempt one or two missions at the scrimmage.
- The scrimmage is scheduled early in the season so that new teams really understand the local competition in time to prepare for it.
- Each team will have as many robot mission attempts as time permits.
- The scrimmage is not a full competition; there is no team judging or project presentation.
- Some informal awards presented on paper certificates.

Los Altos Local Competition

- The Los Altos Local Competition is November 19 from 12:30 to 18:00.
- Oak Avenue School and Covington School are the planned sites. Check the website later in the season to find out your teams scrimmage location.
- Each team will have four robot mission attempts.
- Full competition judging and research presentations.
- Awards are paper certificates.
- Qualification for the state competition is awarded to the top teams.
- A fixed number of state qualification slots are allocated to Los Altos based on the number of teams competing in Los Altos and the number of Northern California teams.

State Competition

- 64 Northern California teams met at the state competition in San Jose last year. This included six teams from Los Altos.
- Each team will have three robot mission attempts.
- There is a fee to compete in the state competition. It is run by volunteers but there are substantial expenses that are not covered by sponsorships.
- Lego Trophies are awarded to the top teams.
- The 2005 State Competition is not scheduled yet. Check the Los Altos Robotics or FLL web pages for updates.
- Teams that don't qualify to compete are invited to attend the state competition. There is no admission fee to be a spectator at any of the competitions.

Your Goals for the Team

- Figure out what your goals are for your team.
- For me, my goals are for them to enjoy building and programming robots so much that they look forward to coming to the meetings and want to do it again next year.
- All teams should have fun and do their best.

Coaching Style

- Keep it fun for the team.
- I try to help children overcome hurdles that they have been stuck on for an hour or so. I make a few comments from time to time, but for the most part I stay out of the way.
- I encourage the children to take charge of the meetings and run them. This works better with older kids.
- I try to get other parents to let the children do the work. Let's face it, this robotics stuff is fun and it is hard for the parents to let the children have all the fun.

Things that have worked for me

- Begin each meeting with a review of what happened at the last meeting and what needs to be done at this meeting. Keep it short.
- Half way through the meeting and at the end of the meeting, I get the team to run against the challenge.
- Try to be positive. Try to keep a good ratio of good to critical statements.
- Use a timer to set up ten minute time slots to share the computer(s), robots, and/or the playing field.
- Teams need help understanding the time line of the competition season. Print out a simple calendar that shows all the weeks of the season with meeting, holidays, and competitions labeled.

More Things that have worked for me

- Try to get the team members to pick out one or two missions and own them. Then they are the ones that are responsible for doing all of the building and programming for that mission.
- At the competitions, only two team members are allowed at the table at a time. No coaches. Have the team members cycle through the missions. Child 1 does missions one and then child 2 trades places with her and does mission 2 and so on.
- A good schedule is to meet Friday evening or afternoon right after school and Sunday afternoon at 1:00 PM for 2 to 2.5 hours.

Things to avoid:

- Don't "help" the team see what is wrong with their robot so that they can fix it and score more points. Coaches and parents that do this end up putting a lot of pressure on the team and the fun goes out of FLL for the team.
- I have seen teams where the coaches know way too much about the robot. The coaches know the entire construction and programming of the robot. It is OK to help some; however, let the team members do the fun building and programming.

Problem Team Members and Parents

It is not uncommon for a team to have difficulty with some team members or overly helpful parents. Usually they respond well to clearly defined boundaries and the problems are quickly dealt with and go away. I suggest:

- Deal with them directly because bad experiences with fellow team members and coaches are high on the list of reasons children do not return for another season.
- Talk to the person one-on-one out of ear shot of the rest of the team or outside of team meeting hours.

Problem Team Members and Parents

- If problems with a child persist for two or more meetings, require one of the child's parents to be there to take care of the child.
- Have the child take a time out in another room or call a parent and have them taken home.
- If this does not work, remove them from the team. While this is not fun to do, it may make the difference between your child participating in FLL again next year or not.

Meeting Plans: Set Goals

- At the first meeting, have each team member and the coaches talk about what their hopes and goals are for the season and write them down.
- For the 2005 season, our team's coaches' hopes and goals are:
 - That the team works together through the entire season.
 - That team members take on leadership roles in team meetings.
 - That team members learn to work with each other and respect each other.
 - That all individuals feel comfortable with voicing ideas.

Meeting Plans: Set Goals

- Some of the seventh grader team members' goals and hopes are to:
 - Do well in competition(s).
 - Have a calendar showing team meetings and times.
 - Work together well.
 - Have a build schedule and follow it.
 - Have after-hour sessions and do them.
 - Have positive enthusiastic encouragement.
 - Have good kit organization and return parts where they go.

Meeting Plans: Getting Started

- After recording your team's hopes and goals and your robot kit arrives, go through the programming training lessons with the team.
- The team members usually love to put together LEGO kits and are usually very good at it. This can be a good break from the training exercises.
- Once the game is announced, September 12 for 2005, print out the game description and rules and go through them with the team.
- The FLL coaches guide talks about doing brain storming to come up with good ideas, but I have not had much luck with this. The kids can get frustrated if the coach wants to them to talk too much instead of working with the robot.

Meeting Plans: Ongoing

- Once you have made it through the training, exercises, building the playing field elements, and understanding the game and the rules, most of the meetings will be design, building, programming, and test runs.
- Try and get the team to settle on a good base structure for the robot as soon as possible so that they can move on to design attachments and program the robot.
- Try to get the team to lock down their design a few weeks before the tournaments and run their robot over and over again to sort out the bugs.
